ANNEX	159

INTRODUCTION

This edition of the Western and Central Pacific Fisheries Commission (WCPFC) Tuna Fishery Yearbook presents annual catch estimates in the WCPFC Statistical Area (Figure 1) from 1970¹ to 2023. The tables of catch statistics cover the WCPFC key tuna and billfish species caught in the region: albacore (*Thunnus alalunga*), bigeye (*Thunnus obesus*), skipjack (*Katsuwonus pelamis*), yellowfin (*Thunnus albacares*), black marlin (*Makaira indica*), blue marlin (*Makaira nigricans*), striped marlin (*Tetrapturus audax*) and swordfish (*Xiphias gladius*). The WCFPC, through their member countries, are obliged to compile estimates of key shark species, some of which are also covered in the longline fleet tables: blue shark (*Prionace glauca*), silky shark (*Carcharhinus falciformis*), oceanic whitetip shark (*Carcharhinus longimanus*) and mako sharks (*Isurus* spp.).

Catches of other species are not covered explicitly, and estimates of discards (weight) have only been included in total catch by species since 2017 (SPC-OFP, 2024), noting that estimates of discards in number are not yet included. Recent studies have used observer data in order to better estimate bycatch and discards in the longline and purse seine fisheries (see Peatman and Nicol, 2023; Peatman et al., 2024).

The main industrial fishing methods employed in the WCPFC region include longline, pole-and-line, purse seine and troll. The domestic fisheries of Indonesia and the Philippines employ several other methods. Driftnet fishing for albacore in the South Pacific Ocean ceased in 1991. Individual fleets presented herein cover vessels that are flagged to that nation and those vessels considered to be ‘chartered’ according to the WCPFC Conservation and Management Measure (CMM 2021-04) on Charter Notification².

Statistical tables covering individual fleets are followed by tables summarising the numbers of vessels and catches by species and gear type in the WCPFC Statistical Area (see Figure 1). Tables are presented summarising the catch by species in the Western and Central Pacific Ocean (WCPO) and the Eastern Pacific Ocean (EPO—see Figure 2), the North and South Pacific Oceans (see Figure 3-left), and the WCPFC Area north and south of the equator (see Figure 3-right). Figure 4 shows the approximate 200-mile zones in the WCPFC Statistical Area in the context of the distribution of catch by species for each gear presented in Figures 87–90. Global catches by gear and species are also presented.

For the purse-seine fishery, studies using observer data (e.g., Lawson, 2010, 2012, 2013, 2014; Hampton and Williams, 2011, 2017) show that the logsheet-reported catch, mainly for associated sets, contain higher quantities of yellowfin and bigeye tuna that have been misreported as skipjack tuna. Purse-seine catch estimates that have been adjusted with species compositions determined from observer grab samples corrected for size selectivity bias (see Peatman et al., 2019 for the latest methodology) are presented herein as the best available WCPFC purse-seine catch estimates for skipjack, yellowfin and bigeye tuna. All composite tables and figures referring to purse-seine species catch are consistent with these estimates. The estimates of purse seine catch by species may differ from the original estimates provided by WCPFC member countries for their fleets, but total purse seine catch will not differ. The purse seine species catch estimates are produced from statistical models and will therefore change from year to year as more data become available. The unadjusted, logsheet-reported purse-seine species catches, as submitted by member countries to the WCPFC, are included in the purse seine fleet tables in grey, italic font.

For the longline fishery, estimates of key shark species have improved in recent years but for most fleets remain uncertain due to (i) clear under-reporting of catches, or (ii) very low coverage of observer data used to estimate these catches. The estimates of longline catches of key shark species that are considered uncertain appear in grey, italic font; these catches are included in ‘Total Catch’.

The tables of annual catch estimates for individual fleets cover those years during which the fleet is known

¹ The time series has been truncated at 1970 for presentation purposes; however, data extending back to 1950 have been made available on the WCPFC website for reference.

² <https://cmm.wcpfc.int/measure/cmm-2021-04>

to have fished; the lack of recent years in a table implies that the fleet has ceased fishing. The tables of annual catch statistics for individual fleets are accompanied by bar charts showing annual catches.

Catches are reported in whole weights. The absence of catches due to no fishing effort and potential missing values are represented by an ellipsis ('...'), or the absence of a record altogether (e.g., a given year by fleet and gear). Records with a reported lack of catch for a given species (i.e., 0 mt) but with positive effort, are represented by a zero ('0'). Some estimates for 2023 should be considered as preliminary. The sources of the estimates are available from the SPC Oceanic Fisheries Programme.

TRENDS IN TUNA CATCHES BY AREA, SPECIES AND GEAR

Figure 83: Catches in the WCPFC Statistical Area, by species

Figure 84: Catches in the WCPFC Statistical Area, by gear

Figure 85: Catches in the Pacific Ocean, by species

Figure 86: Global tuna catches, by species

WCPFC AREA: DISTRIBUTION OF LONGLINE TUNA CATCHES

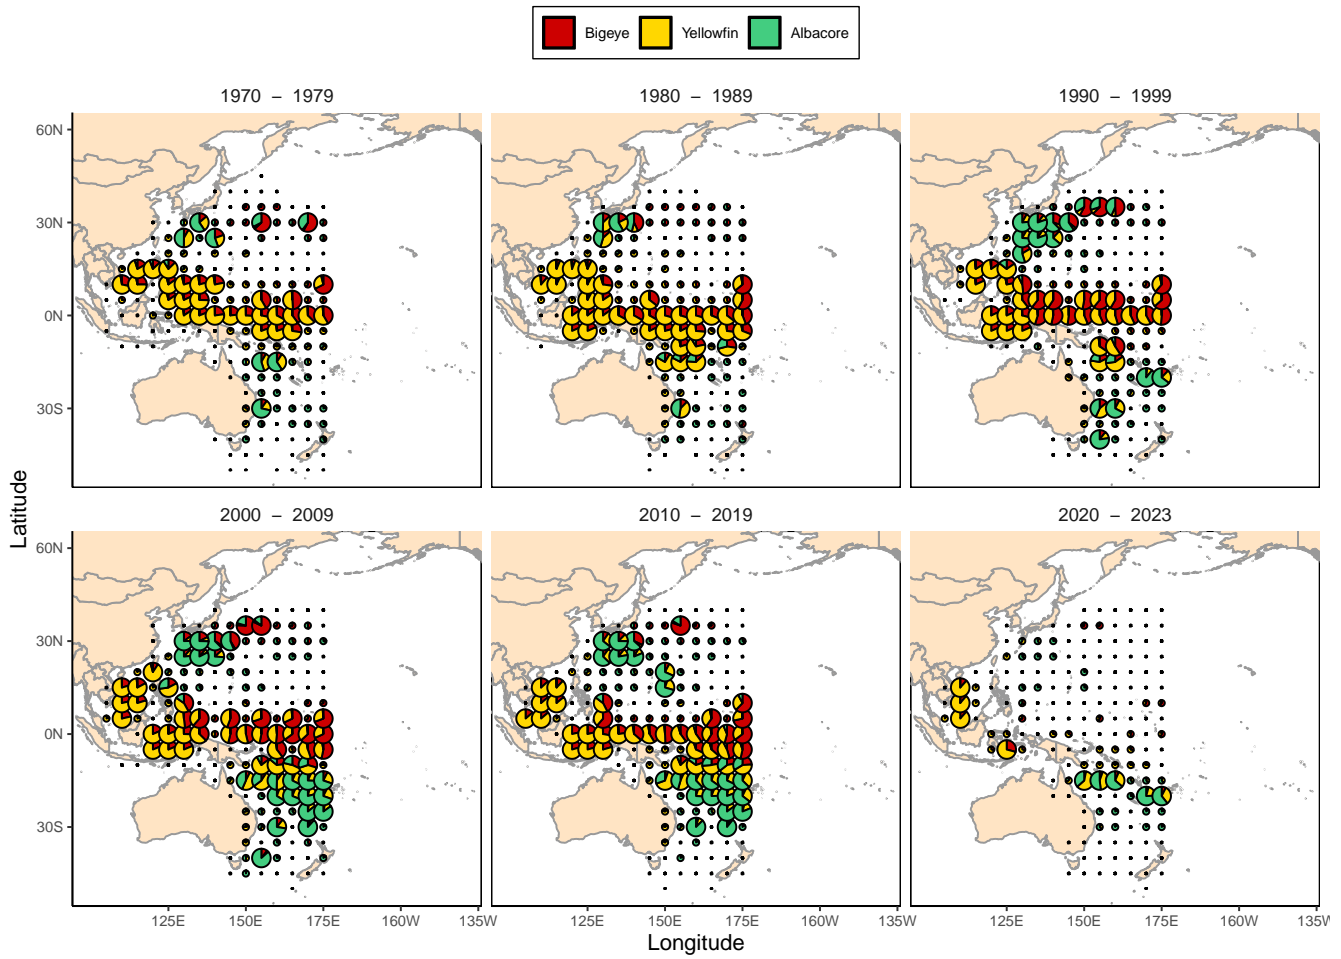

Figure 87: Distribution of target tuna catches by species for the WCPFC LONGLINE fishery, by decade since 1970. The size of the plotting symbols are scaled to represent total catch in 3 categories: up to 3,000, 10,000 and 30,000+ tonnes.

WCPFC AREA: DISTRIBUTION OF LONGLINE BILLFISH CATCHES

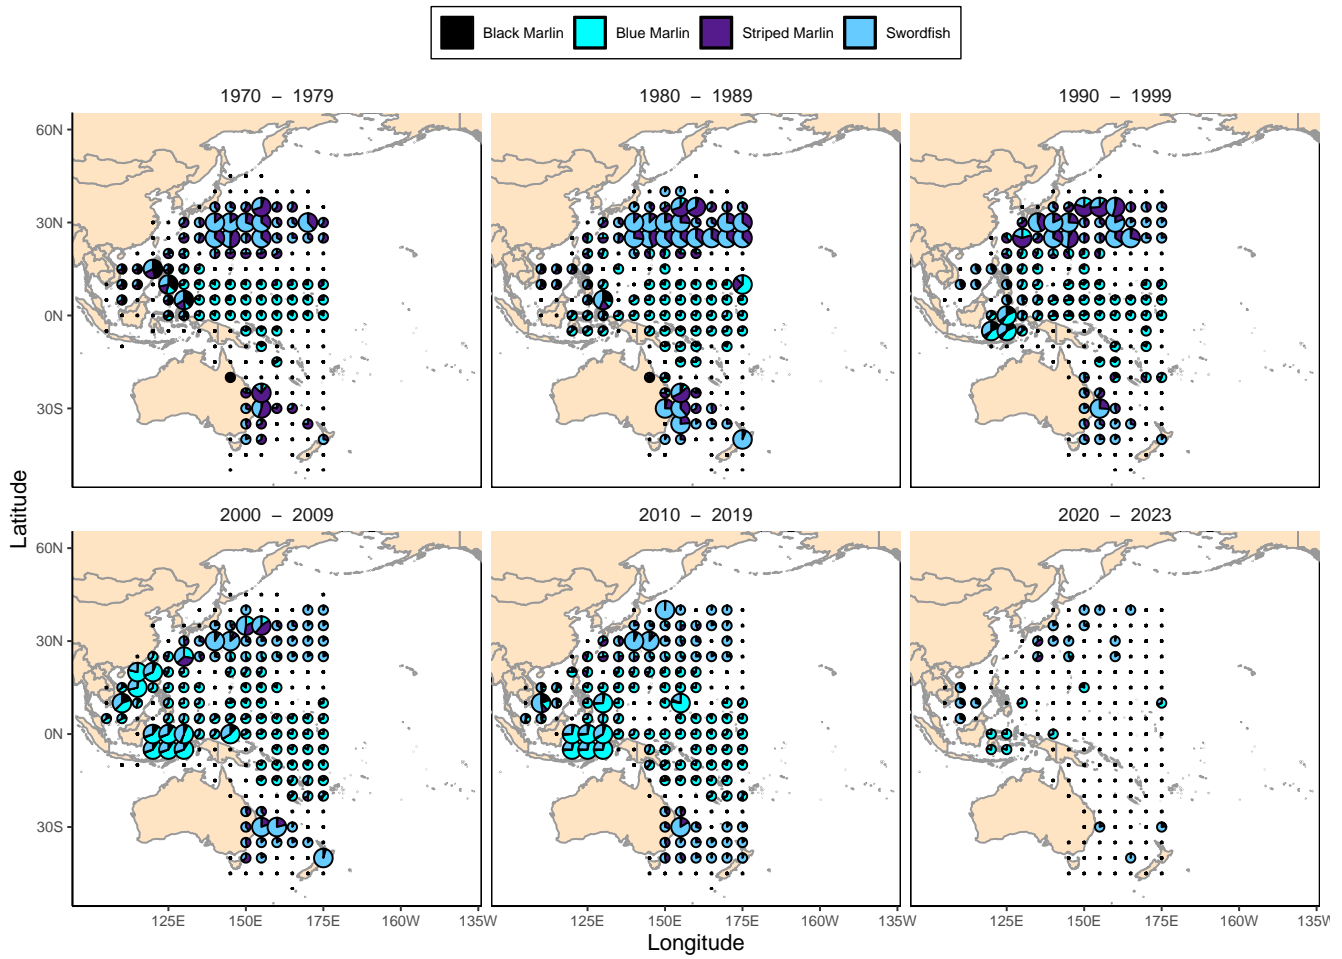

Figure 88: Distribution of billfish catches by species for the WCPFC LONGLINE fishery, by decade since 1970. The size of the plotting symbols are scaled to represent catch totals in 3 categories: up to 600, 3,000 and 6,000+ tonnes.

WCPFC AREA: DISTRIBUTION OF POLE-AND-LINE TUNA CATCHES

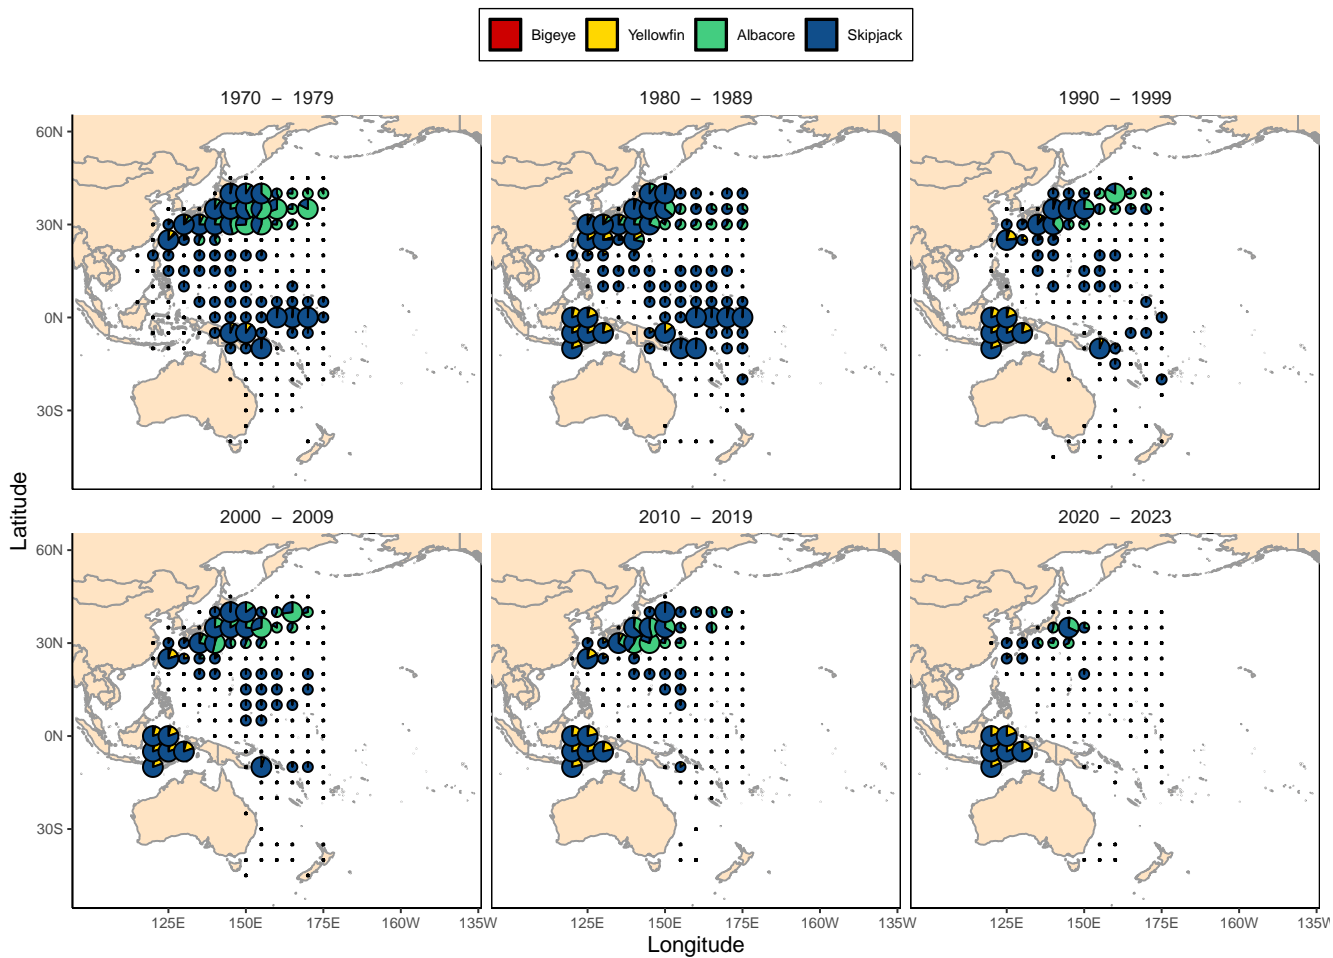

Figure 89: Distribution of target tuna catches by species for the WCPFC POLE-AND-LINE fishery, by decade since 1970. The size of the plotting symbols are scaled to represent catch totals in 3 categories: up to 8,000, 40,000 and 80,000+ tonnes.

WCPFC AREA: DISTRIBUTION OF PURSE SEINE TUNA CATCHES

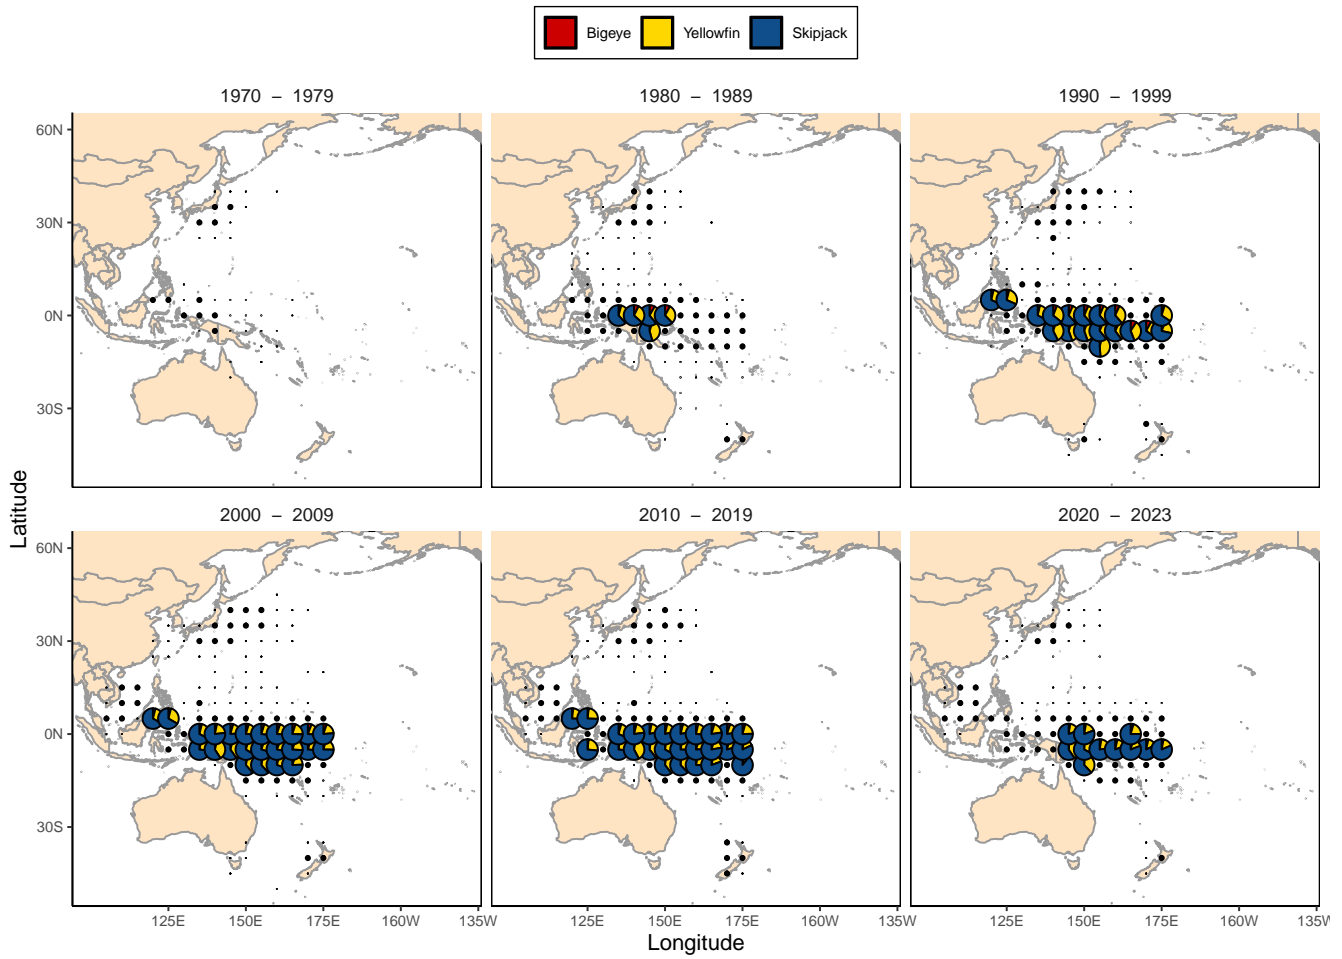

Figure 90: Distribution of target tuna catches by species for the WCPFC PURSE SEINE fishery, by decade since 1970. The size of the plotting symbols are scaled to represent catch totals in 3 categories: up to 10,000, 200,000 and 1,000,000+ tonnes.

WCPFC AREA: BILLFISH CATCHES BY GEAR AND SPECIES

ANNEX

Table A1: Summary of the species that were combined in the ‘OTHER’ catch category, by gear.

GEAR	ALB	BLM	BUM	HAM	MLS	PBF	POR	RHN	SFA	SKJ	SWO	THR
Longline	X	...	X	X	...	X	X	...	X
Pole-and-line	X
Purse seine	X	X	X	...	X	X	...	X	X	...

Table A2: Mapping of the FAO species codes in Table A1. to the corresponding species name.

Species Code	Species Name
ALB	ALBACORE
BLM	BLACK MARLIN
BUM	BLUE MARLIN
HAM	HAMMERHEAD SHARKS NEI
MLS	STRIPED MARLIN
PBF	PACIFIC BLUEFIN TUNA
POR	PORBEAGLE SHARK
RHN	WHALE SHARK
SFA	INDO-PACIFIC SAILFISH
SKJ	SKIPJACK TUNA
SWO	SWORDFISH
THR	THRESHER SHARKS NEI
