

**SCIENTIFIC COMMITTEE
SIXTEENTH REGULAR SESSION**

ELECTRONIC MEETING
11-20 August 2020

ANNUAL REPORT TO THE COMMISSION
PART 1: INFORMATION ON FISHERIES, RESEARCH, AND STATISTICS

WCPFC-SC16-AR/CNM-35

REPUBLIC OF LIBERIA

**ANNUAL REPORT (2019) TO THE WESTERN CENTRAL PACIFIC
FISHERIES COMMISSION (WCPFC)**

PART I: INFORMATION ON FISHERIES, RESEARCH, AND STATISTICS

REPUBLIC OF LIBERIA

ANNUAL REPORT (2019)

July 10, 2020

Scientific data was provided to the Commission in accordance with the decision relating to the provision of scientific data to the Commission by 30 April 2019.	There is no scientific data to report.
---	--

1. Abstract/Summary

The Republic of Liberia is situated within the east central Atlantic region of the Gulf of Guinea. With an Atlantic coastline of approximately 570km and a continental shelf averaging 34km in width, the marine fishing grounds of Liberia cover 186 322.2km² within the Exclusive Economic Zone (EEZ).¹ In 2017, Liberia's Inshore Exclusion Zone (IEZ) was reduced from six to three nautical miles, and is reserved for artisanal and semi-industrial fishing activities.²

Liberia's continental shelf area has considerable marine fish species. The main oceanic pelagic resources are tuna and tuna-like species such as yellowfin tuna, bonito and marlin. Demersal fish species are also found in marine waters and are harvested on a commercial basis.³ Crustaceans such as shrimp, crab and lobster are less abundant, but are of much higher value than finfish species, and are targeted for Liberia's export market.⁴ Liberia's fisheries sector contributes approximately 10% to the country's Gross Domestic Product (GDP).

Liberia's fisheries has three main subcomponents: 1) Marine (comprises of industrial and artisanal activities); 2) Inland fisheries (mainly artisanal) and 3) Aquaculture (through subsistence fish farming). Artisanal fisheries are a key sector in Liberia, providing food and livelihood to coastal communities. There are roughly 3,300 canoes and more than 11,000 fishers operating actively from 114 fish landing sites along the coastline. The artisanal fleet comprises the indigenous Kru canoe, operated by Kru fishermen using paddles or sail.⁵ The marine industrial fishery is divided into a trawl fishery for shrimp and demersal finfish, which provides frozen whole fish, and shrimp for the local market and an offshore large pelagic fishery. The inland fisheries are based on rivers, lakes and wetlands such as swamps and coastal lagoons. The aquaculture sub-sector, which includes mariculture, is underdeveloped and largely subsistence, with about 300 fish farmers engaged in some form of fish culture generally on a part-time basis. About 1,704 ponds (113.9 hectares) of various sizes are distributed in about 160 rural communities of which 1,125 (73.3 hectares) are used for farming tilapia and catfish.

The National Fisheries & Aquaculture Authority (NAFAA) regulates the fishery sector in Liberia. Major functions of NAFAA include: registration and inspection of artisanal fishing canoes, granting of fishing licenses, record of catch data, and deployment of fisheries enumerators at landing

sites. Liberia’s fisheries sector received a major boost in 2017 with the commissioning of the Mesurado Industries Fisheries Terminal, which is equipped with a monitoring system to manage the country’s agreements with the European Union licensed fishing vessels in Liberia’s territorial waters.⁶ The Fish Monitoring Center (FMC) works closely in collaboration with the Liberia Maritime Authority (LMA) to monitor fishing vessels in Liberian waters and reefer vessels transshipping in regional fishing areas to effectively combat illegal, unreported and unregulated (IUU) fishing activities.

2. Tabular Annual (2019) Fisheries Information

Several Liberian flagged carrier vessels were actively engaged in transshipment operations during the January-December period. Below you will said transshipment data:

- (1) the **total quantities, by weight**, that were transshipped by vessels the CCM is responsible for reporting against, with those quantities broken down by:

a) offloaded and received;	b) transshipped in port, transshipped at sea in areas of national jurisdiction, and transshipped beyond areas...	c) transshipped inside the Convention Area and transshipped outside the Convention Area;	d) caught inside the Convention Area and caught outside the Convention Area;	e) Species	f) Product Form	g) Fishing gear
offloaded		328,486	n/a	ALB	Frozen	n/a
		5,310,584	n/a	BET	Frozen	n/a
		20,467	n/a	BLM	Frozen	n/a
		92,436	n/a	BUM	Frozen	n/a
		42,397	n/a	MLS	Frozen	n/a

⁶ New Fishing Site, Terminal in Liberia Brings Better Fish and More Jobs:

<http://www.worldbank.org/en/news/feature/2018/06/08/new-fishing-site-terminal-in-liberia-brings-better-fish-and-more-jobs>

(2) the **number of transshipments** involving highly migratory fish stocks covered by this measure by fishing vessels that is responsible for reporting against, broken down by:

a) offloaded and received	b) transshipped in port, transshipped at sea in areas of national jurisdiction, and transshipped beyond areas of national jurisdiction	c) transshipped inside the Convention Area and transshipped outside the Convention Area	d) caught inside the Convention Area and caught outside the Convention Area	e) fishing gear
offloaded		147		
received		147		

3. Background

Liberia is a Cooperating Non-Member (CNM) of the WCPFC and currently has several flagged carrier vessels registered on the WCPFC Record of Vessels.

4. Socio-economic Factors

Fisheries play a vital role in the livelihood of the coastal population. It is moreover an essential sector in the agricultural framework of Liberia as, well as in the national economy. In recent years, fisheries have contributed approximately 10% to the country's Gross Domestic Product (GDP) and the sector provides full or part time employment for about 37,000 people.⁷

With the reduction of Liberia's IEZ from six to three nautical miles (*see* Executive Order No. 84), industrial and semi-industrial fishing is expected to be revitalized, thereby increasing fisheries contribution to the national economy.

5. Disposal of Catch

Liberian flagged vessels are not catch or donor vessels; they are carrier and support vessels.

6. Onshore Developments

On December 9, 2015, Liberia and the European Union (EU) signed a 5-year Sustainable Fisheries Partnership Agreement (SFPA) and associated protocol, which set out fishing opportunities for EU vessels in Liberian territorial waters. The SFPA further expands the EU's network of tuna

⁷ World Food Program, *The State of Food and Nutrition Insecurity in Liberia* (2010). Available at: <http://home.wfp.org/stellent/groups/public/documents/ena/wfp231357.pdf>.

fisheries agreements in West Africa. The related protocol offers opportunities to a number of purse seiners and surface longline vessels to fish for tuna and tuna-like species in waters under Liberia's jurisdiction, based on a reference tonnage of 6,500 tons.⁸

Liberia is collaborating with Sierra Leone to implement a sub-project created by the EAF-Nansen project to develop a sector specific management plan for the artisanal fisheries of the two countries.⁹ The Ecosystem Approach to Fisheries (EAF) system covers issues related to target species, non-target species, other dependent species within the ecosystem, minimizing waste and pollution, endangered species biodiversity, optimum utilization, the welfare of various states involved including the interests of artisanal and subsistence fishers.

The EAF-Nansen Project is a partnership between the Norwegian Agency for Development (NORAD), the Norwegian Institute for Marine Research (IMR) and the Food and Agriculture Organization of the United Nations (FAO). Through a tripartite agreement, these organizations are supporting Liberia and other developing countries in their efforts to fulfil their commitments and implement an ecosystems approach to fisheries.¹⁰

7. Future Prospect of Fishery

The future of Liberia's fishery looks promising. The Government and people of Liberia look forward to a sustainable managed fisheries sector, capable of:

- providing increased profitable fisheries employment opportunities while offering an enabling environment for upgrading technical skills for enhanced value added fisheries vocations;
- engaging participatory fisheries management institutions based on community and stakeholder structures for the creation of opportunities for socio-economic development;
- contributing to GDP, national food and nutritional security and improving living conditions, by upgrading and adopting appropriate, modern and efficient fisheries capabilities for increased fish production while reducing losses through illegal fishing; and
- deriving net benefits from a vibrant fish trade supported by, value addition systems and fisheries infrastructure for fish landing and export, as well as efficient fishing input supply and distribution systems.¹¹

8. Status of Tuna Fishery Data Collection Systems

Liberian flagged vessels operating in the WCPFC Area and foreign vessels operating in Liberian waters are required to install satellite-based vessel monitoring systems (VMS), which are capable of providing static unique identifier; real time geographical position of the vessel; and date and time. Moreover, Liberian flagged vessels operating in the WCPFC Area are equipped with VMS tablets, which are capable of transmitting transshipment data to the FMC and RFMOs.
