

**COMMISSION  
TENTH REGULAR SESSION**  
Cairns, Australia  
2-6 December 2013

---

**CONSERVATION AND MANAGEMENT MEASURE FOR WCPFC IMPLEMENTATION OF A  
UNIQUE VESSEL IDENTIFIER (UVI)**

---

**Conservation and Management Measure 2013-04**

**Explanatory Note**

Unique vessel identifiers (UVI) are useful to quickly and accurately identify vessels and trace and verify their activity over time, irrespective of change of name, ownership, or flag. For those reasons, there is a wide recognition that UVIs can be useful in helping combat illegal, unreported, and unregulated (IUU) fishing (e.g. see <http://www.fao.org/fishery/topic/166301/en>).

The International Maritime Organization's (IMO) Ship Identification Number Scheme involves the use of UVIs that are widely used in the merchant shipping sector. IMO numbers are required for passenger and cargo vessels larger than a certain size, but fishing vessels are excluded. Fishing vessels may apply for IMO numbers, but the administering agency will not, without an explicit agreement, issue them to smaller vessels (vessels < 100 gross tons (GT) or gross registered tons (GRT)), even if applied for. Thus, if all vessels under the purview of the WCPFC are to be assigned UVIs, further action would be necessary by the WCPFC and/or through other international initiatives. The deliberations of the WCPFC on the issue of UVIs to date, along with progress in related international initiatives, are summarized below.

**Global Initiatives**

**FAO and the Global Record**

The Global Record of Fishing Vessels, Refrigerated Transport Vessels and Supply Vessels (Global Record) is an FAO initiative to improve transparency and traceability in the fisheries sector by providing a reliable identification tool for vessels through their lifespan (<http://www.fao.org/fishery/topic/18051/en>). The FAO has identified an essential element of the Global Record to be the assignment of UVIs to every vessel on the Record. Participation in the FAO Global Record is voluntary.

The twenty-ninth Session of the Committee on Fisheries (COFI) agreed that the FAO would take responsibility for managing the Global Record and that the Global Record would eventually include all fishing vessels of sizes greater than or equal to 10 GT, 10 GRT, or 12 m length overall (LOA) regardless of where the vessels operate. The FAO intends to implement this initiative using a three-phase approach, starting with vessels at least 24 m, 100 GT, or 100 GRT

in size. IHS-Fairplay, the administrator of the IMO Ship Identification Number Scheme, has committed to issuing numbers for these larger vessels at no cost, and is still considering if and how it would issue unique numbers for vessels of smaller sizes. The United Nations General Assembly, in consensus Resolution 67/79 (2012), encouraged the expeditious development of an FAO global record that includes a unique vessel identifier system and, as a first step, uses the IMO numbering scheme for fishing vessels larger than 100 GRT in size.

### **International Maritime Organization**

There is broad recognition that perhaps the most effective approach to expanding the use of UVIs into the fishery sector is to build on the well established IMO Ship Identification Number Scheme (<http://www.imo.org/ourwork/safety/implementation/pages/imo-identification-number-scheme.aspx>), operated by IHS-Fairplay. Under the International Convention for the Safety of Life at Sea (SOLAS), UVIs, in the form of IMO numbers, are required for all cargo ships 300 GT or larger and all passenger vessels 100 GT or larger, but fishing vessels are excluded from the requirement.

In addition to the mandatory requirements under SOLAS, there is a non-binding instrument, IMO Resolution A.600(15), that calls for the application of the IMO Ship Identification Number Scheme to vessels at least 100 GT in size. However, it also excludes vessels solely engaged in fishing. In June 2013, a subsidiary body of the IMO endorsed a proposal to remove the exclusion for vessels solely engaged in fishing. The proposal will be sent to the IMO Assembly in November 2013 for approval. If approved, the IMO Ship Identification Number Scheme would apply on a non-binding basis to fishing vessels greater than or equal to 100 GT.

Despite the exclusions for fishing vessels under the SOLAS requirements and the non-binding IMO resolution, IHS-Fairplay has issued IMO numbers to a large number of fishing vessels (about 23,500; see <http://www.fao.org/fishery/topic/18021/en>).<sup>1</sup> In some of these cases the number is issued upon application by the vessel owner, and in others it is issued automatically by IHS-Fairplay in response to vessel data it has received from flag States.

### **Tuna RFMOs and the Consolidated List of Authorized Vessels**

The tuna RFMOs, through the Kobe process, have endorsed the need to create a harmonized global record of tuna vessels, including UVIs, and for this to be coordinated with the Global Record. The list, known as the Consolidated List of Authorized Vessels, would facilitate the exchange of vessel information and support broader monitoring, control and surveillance (MCS) efforts, such as port State measures, catch documentation, transshipment verification, and vessel monitoring systems.

### **WCPFC Progress**

The WCPFC has considered implementing a UVI scheme for several years. At TCC6 CCMs expressed concern about the difficulty that many CCMs had with respect to providing all the information required under CMM 2009-01 (Record of Fishing Vessels (RFV)), and some CCMs

---

<sup>1</sup> For vessels not covered by IMO Resolution A.600(15), the numbers issued by HIS-Fairplay are not technically “IMO numbers,” but they are part of the same unique numbering scheme. These numbers are referred to as “Lloyd’s Register” or “LR” numbers in this proposal.

indicated that improving the maintenance and utility of the RFV should precede work on a UVI. By TCC7, several CCMs, including FFA members, voiced their support for expanding the WCPFC RFV data requirements toward those that would be needed to assign UVIs. The FFA members noted that the FFA Vessel Register had been revised to be compatible with a UVI scheme. At WCPFC9, suggestions were made that: (1) the RFV should include the IMO numbers of vessels that have them, and (2) the Commission could take an immediate step of requiring that all vessels that are eligible for IMO numbers (i.e., vessels  $\geq 100$  GT) obtain them. TCC9 considered a proposal from the United States that would do those two things. Based on the discussion at TCC9, the United States has revised its proposal to delete the exemption for non-steel-hulled vessels.

The following table identifies the number of vessels on the RFV, by size, as of April 2013.

Size of Vessel	Number of Vessels
$\geq 100$ GRT	2,671
50 – 99 GRT	1,364
10 – 49 GRT	1,831

### **Commission Decisions**

For the purpose of improving the Commission’s MCS programs, the Commission agrees that it should establish a scheme in which all vessels on the Record of Fishing Vessels have globally unique vessel identifiers (UVIs). Further work is needed to determine how to accomplish this for small vessels. For large vessels, the existing IMO Ship Identification Number Scheme can be taken advantage of immediately. To do so, the Commission takes the following decisions:

1. Effective 1 January 2016, flag CCMs shall ensure that all their fishing vessels that are authorized to be used for fishing in the Convention Area beyond the flag CCM’s area of national jurisdiction and that are at least 100 GT or 100 GRT in size have IMO or LR numbers issued to them.
2. In assessing compliance with the preceding paragraph, the Commission shall take into account extraordinary circumstances in which a vessel owner is not able to obtain an IMO or LR number despite following the appropriate procedures. Flag CCMs shall report any such extraordinary situations in Part 2 of their annual reports.
3. Paragraph 6 of CMM 2009-01 is revised by removing the original submission deadline, which has passed, and adding a new sub-paragraph (s), with footnote, as follows:

- (s) International Maritime Organization (IMO) number or Lloyd’s Register (LR) number, if issued.<sup>4</sup>

<sup>4</sup> Effective 1 January 2016, flag CCMs shall ensure that all their fishing vessels that are authorized to be used for fishing in the Convention Area beyond the flag CCM’s area of national jurisdiction-and that are at least 100 GT or 100 GRT in size have IMO or LR numbers issued to them.

4. The Commission will continue to explore how to ensure that all vessels on the Record of Fishing Vessels have UVIs.
