INTRODUCTION

This edition of the Western and Central Pacific Fisheries Commission (WCPFC) Tuna Fishery Yearbook presents annual catch estimates in the WCPFC Statistical Area (Figure 1) from 1950 to 2012. The tables of catch statistics cover the main commercial tuna and billfish species caught in the region: albacore (*Thunnus alalunga*), bigeye (*Thunnus obesus*), skipjack (*Katsuwonus pelamis*), yellowfin (*Thunnus albacares*), black marlin (*Makaira indica*), blue marlin (*Makaira nigricans*), striped marlin (*Tetrapturus audax*) and swordfish (*Xiphias gladius*). The WCPFC, through their member countries, are now obliged to compile estimates of key shark species, some of which are now covered in the longline fleet tables: blue shark (*Prionace glauca*), silky shark (*Carcharhinus falciformis*), oceanic whitetip shark (*Carcharhinus longimanus*) and mako sharks (*Isurus* spp.). Catches of other species are not covered explicitly, and discards of any species are not considered.

The main industrial fishing methods employed in the WCPFC region include longline, pole-and-line, purse seine and troll. The domestic fisheries of Indonesia and the Philippines employ several other methods. Driftnet fishing for albacore in the South Pacific Ocean ceased in 1991. Individual fleets presented herein cover vessels that are flagged to that nation and those vessels considered to be ‘chartered’ according to the WCPFC Conservation and Management Measure (CMM-2012-05) on Charter Notification¹.

Statistical tables covering individual fleets are followed by tables summarising the numbers of vessels and catches by species and gear type in the WCPFC Statistical Area. Tables summarising the catch by species in the Western and Central Pacific Ocean (WCPO) and the Eastern Pacific Ocean (EPO), and global catches, are also presented.

For the purse-seine fishery, recent studies using observer data (e.g. Lawson, 2007, Lawson, 2010, Lawson, 2012, Lawson, 2013, Hampton and Williams, 2011) show that the logsheet-reported catch, mainly for associated sets, should contain higher quantities of yellowfin and bigeye tuna that have been misreported as skipjack tuna. Purse-seine catch estimates that have been adjusted with species compositions determined from observer grab samples corrected for size selectivity bias (see Lawson, 2010, Lawson, 2012 and Lawson, 2013) are presented herein as the best available WCPFC purse-seine catch estimates for skipjack, yellowfin and bigeye tuna. All composite tables and figures referring to purse-seine species catch are consistent with these estimates. The estimates of purse seine catch by species may differ from the original estimates provided by WCPFC member countries for their fleets, but total purse seine catch will not differ. The purse seine species catch estimates are produced from statistical models and will therefore change from year to year as more data become available. Purse-seine species catches that have been estimated appear in grey, italic font.

For the longline fishery, estimates of key shark species have improved in recent years but for most fleets remain uncertain due to (i) clear under-reporting of catches, or (ii) very low coverage of observer data used to estimate these catches. The estimates of longline catches of key shark species that are considered uncertain appear in grey, italic font.

The tables of annual catch estimates for individual fleets cover those years during which the fleet is known to have fished; the lack of recent years in a table implies that the fleet has ceased fishing.

¹ <http://www.wcpfc.int/system/files/CMM-2012-05-Conservation-and-Management-Measure-Charter-Notification-Scheme.pdf>

The tables of annual catch statistics for individual fleets are accompanied by histograms showing annual catches.

Catches are reported in whole weights. No catches because of no fishing effort are represented by a hyphen ('-'). No catches with positive effort are represented by a zero ('0'). Potential missing values are represented by an ellipsis ('...'), and values carried over from previous years are given in parentheses. Some estimates for 2012 should be considered as preliminary.

The sources of the estimates are available from the SPC Oceanic Fisheries Programme. Maps of catches taken by individual fleets have been omitted to avoid potential non-compliance with the WCPFC's rule that public domain data cover a minimum of three vessels. (See "Rules and Procedures for the Protection, Access to, and Dissemination of Data Compiled by the Commission".)
